

# How To Clean

## Products ?

With the growing popularity of SmartPad products, we're being asked how to clean them + restore their "grip" when they get dirty.

It's only natural for a tacky surface like those on SmartPad products to attract dust and lint over time.

For best results, we recommend keeping SmartPad products clean.

It's easy ...

Just wash using warm water – no soap required or recommended – and a lint-free cloth or sponge to remove the dust embedded on the pad – then wipe dry.

Keeping SmartPad products clean will greatly extend their useful life.

And check out all the SmartPad features and benefits on a short video which can be accessed on the SmartPad website – [www.smartpad.biz](http://www.smartpad.biz)
